

Introduction Project Alpha is a software initiative led by **Sarah Chen** at **TechNova Solutions**. The project aims to integrate **Neo4j** into the company's existing data pipeline.

Technical Stack The system is built using **Python** for backend logic. It connects to a **Graph Database** to map complex relationships. **James Wilson**, the Lead Architect, decided to use **LangChain** for document processing.

Deployment **TechNova Solutions** plans to deploy the first version in San Francisco by March 2026. The infrastructure is hosted on AWS.
